

Salt Water and Marine Atmospheres

IPS warrants that its panels exposed to normal atmospheric conditions, will perform according to the terms, conditions and/or limitations specific to the applicable Signature[®] 200, Signature[®] 300 or Galvalume[®] warranties issued for such panels. IPS does not guarantee the performance of panels subject to corrosive conditions including, but not limited to, salt water/marine environments. While a minimum safe distance from these conditions that is acceptable in all situations cannot be established, IPS does provide general guidelines for installations near these areas.

- 1,500 feet from coastline with surf
- 800 feet from coastline of a large bay
- 400 feet from marshes or canals

Please be advised it is impossible to anticipate each and every condition under which the IPS panels may be exposed to salt spray, salt water or marine atmospheres. Therefore, the general guidelines described above may vary based on project or location specific conditions.
