

## Hangars, Warehouses &amp; Light Commercial/Industrial

**◀ Apache Corp.**  
Houston, TX

For the 220' x 200' x 40' hangar, Insulated Panel Systems of Stafford, TX, manufactured 19,400 sq. ft. of EWP250 panels in Brownstone PVDF for the walls. Another 9,900 sq. ft. in Polar White were applied to the fascia and soffit. The 2-1/2"-thick panels consist of a 24-gauge Galvalume steel exterior skin, a modified isocyanurate core and a 26-gauge Galvalume steel interior skin with a USDA White finish. They have a 17.3 R-value. The building columns were covered with 8,600

sq. ft. of 22-gauge FW panels, also from Insulated Panel Systems.

Houston-based Spaw-Maxwell Co. was the general contractor. Five Star Steel, New Caney, TX, installed the metal panels.

**◀ LeNature's Phoenix Water Bottling Plant**  
Phoenix, AZ

The bottling plant in the desert was designed by Ware Malcomb, Irvine, CA, to have a geometric, clean, contemporary look. Included in that design were an elliptical entrance and turrets. To smoothly form those shapes, 40,000 sq. ft. of Alucobond Material from Alcan Composites USA Inc. in Benton, KY, were used. The 4mm-thick composite material consists of .020" aluminum skins thermobonded to a plastic core. A Sunrise Silver Metallic PVDF finish coats the panels.

The project was completed in March 2006. Phoenix-based Howard S. Wright was the general contractor. Elward Construction Co., Tempe, AZ, fabricated and installed the aluminum composite material.

**◀ Riverside Airport**  
Jenks, OK

Metal Building Industries, Tulsa, OK, erected 11 hangars from January to March 2006. Six of those measure 50' x 50' x 18' and feature purlins and girts from Central States Mfg. of Lowell, AR. The company also manufactured the 26-gauge bare Galvalume steel R-Loc panels installed on the roofs. The same panels with a Light Stone finish were used on the walls.
